

Mobile Industry Controller

**New
Technology**

The Decision Mobile Industry Controller is an APP software for mobile device, which can be used to control full range of USB industry control board (industry I/O, AD/DA, photo isolator input, relay output) produced by Decision Group. By using USB connector to connect both mobile device and USB industry control board, user can use mobile device to control ON/OFF of external devices, to drive external power relays, to activate alarms, and to convert / acquire high precision data... etc. The product extends your mobile device with portable industry I/O control capabilities.

The Mobile Industry Controller provides the Plug and Play (PnP) features. User need not write any code, and no complicated installation procedures are necessary. The Mobile Industry Controller is an easy-to-use and user friendly APP. It is a free software, which can be downloaded from Android play store.

Decision group provides a free training course to business partner. The course covers the topic of related software of Mobile Industry Controller development techniques on Android platform. Please contact with service center of Decision Group for further information.
